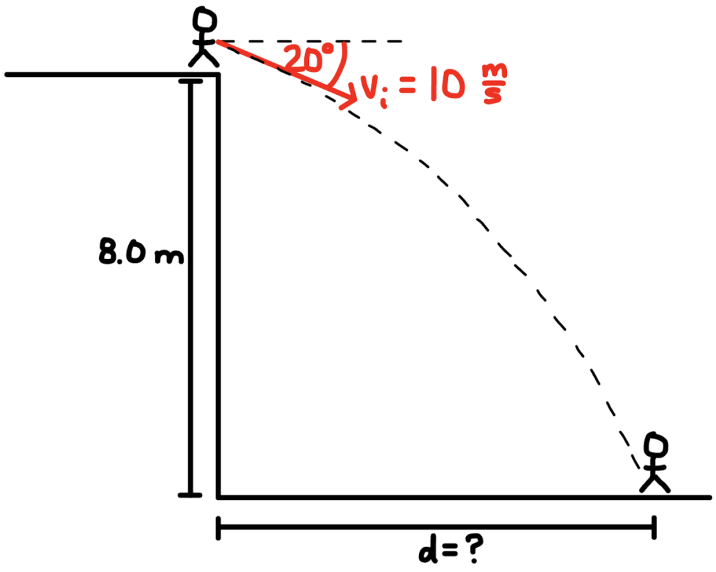
Anna throws a ball from a 8.0 m high tower towards Bobby at a velocity of 10 m/s 20° below the horizontal. How far from the tower should Bobby stand to catch the ball?



A rock is thrown from the top of a 10 m high building at a velocity of 10 m/s 37° above the horizontal. A 6 m tall tree is 12 m from the building. Will the rock make it over the tree? If it does, at what speed does it hit the ground? If it doesn't, at what speed does it hit the tree?
